SUMMER ENERGY FIELD TRIP WEEKS FOR TEACHERS

The energy industry provides many opportunities for careers in the Houston area. Come along with us as we tour diverse sites that play different roles in the energy industry to gain knowledge of various careers in the energy sector. Learn how you can help students connect their abilities and personal interests to promising careers that are in demand—and see TEKS concepts in action. Educators will learn about the relationships between science and energy careers in these 3 three day workshops. You may do one or all of the weeks.

These energy workshops are for middle and high school science teachers, as well as career awareness program staff. Participants must meet at HMNS. Lunch and transportation to/from HMNS and the sites is provided. Participants must be able to walk for moderate periods of time.

Tickets \$45 per week per educator
